BELFOR Environmental is a subsidiary of BELFOR Holdings, the parent company of BELFOR Property Restoration and the largest disaster management company in the world. In addition to its offices in the U.S., BELFOR Environmental is supported by the experience and distribution strength of more than 300 BELFOR locations.

BELFOR 
ENVIRONMENTAL

SINGLE-SOURCE SOLUTIONS

Whether its the decontamination and demolition of process facilities, an emergency response for a chemical or petroleum release, or asbestos, lead or mold abatement, BELFOR Environmental is the premier provider of single-source environmental services in the United States.

EMERGENCY RESPONSE SERVICES

Emergency Response Services are the foundation of our business. BELFOR Environmental specializes in serving clients in a variety of industries including: Municipalities, Healthcare, Rail and Highway Transportation, Utilities and more. Our OSHA-Certified employees are among the best trained personnel in the industry. They rotate on a 7-day schedule to ensure rapid response, stabilization and cleanup of any hazardous material spill - 24 hours a day, 365 days a year.

BELFOR Environmental maintains pre-stocked trucks and trailers loaded with equipment and materials for most chemical and petroleum spills - whether land or water-borne. The vehicles contain an array of absorbents, PPE and chemical handling equipment, ensuring a faster response to the client site. The response can be further enhanced by dispatching specialized chemical transfer equipment that can save valuable time during a response effort.

RAILROAD SERVICES

Railroad support services are a large part of our business. All employees involved in railroad work receive specialized training, including E-Rail training and baseline OSHA Hazwoper training. We have built a reputation for excellence in this area and are continually working to improve our level of service by investing in specialty equipment and training for our personnel.

ABATEMENT SERVICES

BELFOR Environmental manages hundreds of abatement jobs annually, including renovations, demolitions, retrofitting, soil remediation and emergency response. Our Abatement Service programs are designed to provide cost-effective solutions for most hazardous materials including:

- Asbestos
- Lead
- Mold
- Contaminated Soil
- Hazardous Material/Chemical Removals
- Structural or Equipment Decontamination/Deconstruction (tanks, pipes and process equipment)

Jobs are evaluated with confidentiality and discretion. BELFOR Environmental managers oversee each project from start to finish, regardless of size.

HAZARDOUS WASTE MANAGEMENT

Waste management/removal and associated regulatory issues are an important part of any BELFOR Environmental project. We are knowledgeable of the complex transportation and disposal regulations that apply to any situation involving hazardous material and waste.

Through standing agreements with a variety of treatment and disposal firms, BELFOR Environmental can offer:

- Cost-Effective Alternatives for Waste Disposal
- No Bias in Selection of Final Disposal Facility
- Best Total Project Value for Clients Based On Quality, Compliance, Price and Client Preference

FACILITY SERVICES

BELFOR Environmental offers complete turnkey solutions for In-Plant Decontamination Services and Full/Partial Facility Decommissioning Services. BELFOR teams are trained and experienced with the removal of heavy metal, PCB, asbestos, dioxin, acids/bases, organic solvents, petroleum and radioactive contaminants. We offer complete decontamination and demolition of tanks, piping, pumps, process equipment, support structures, super structures, and most any surface. Our methods include power washing, scarification, solvent foam extraction, grit blasting, dry ice blasting and a variety of thin-layer removal techniques.

REMEDIAL CONSTRUCTION

At BELFOR Environmental, we welcome the opportunity to effectively manage larger projects. We offer turnkey project management skills including cost estimating, procurement, subcontractor management, waste tracking, and regulatory compliance support.

SAFETY

BELFOR Environmental is committed to a safe work environment for its clients and its employees. Our health and safety programs, combined with rigorous training requirements, help us deliver seamless, efficient service while maintaining the highest safety standards.
