Disinfection Services for COVID-19

OUR ENVIRONMENTAL SERVICES

BELFOR OFFERS DISINFECTION OF SURFACES AFTER BIOLOGICAL CONTAMINATION

BELFOR offers disinfection services for buildings and facilities exposed to contamination caused by fire, water, storms, mould, hazmat accidents, crime scenes, and infectious materials. We have responded to disinfection and decontamination projects for over 25 years. We are currently providing disinfection services for healthcare facilities, schools, food industry and production sites. Our safe and synergistic procedures are validated by appropriate experts and provide a combination of disinfection and removal of biohazardous contamination, making them more effective than simple cleaning methods. Disinfection is also recommended in cases of suspected biological contamination.

Our approach:

- Treatment of all direct and most indirect reachable surfaces of buildings
- Disinfection of affected equipment, Heating Ventilation and Air Conditioning (HVAC) systems
- Fogging to eliminate airborne viruses and bacteria

These services help:

- Reduce the risk of infection or illness
- Prevent cross-contamination
- Reduce operations downtime by 75% or more
- Reduce suspected cases with preventative disinfection, which is proven to be effective

Professional help from a single source

Fire damage restoration | Water damage restoration | Odour removal | Leak Detection | Building Restoration | Machinery restoration | Renovation of electronics and electrical systems | Emergency operations | Data and document Restoration | Restoration of inventories, inventory, furniture | Debris removal and disposal | Asbestos and pollutants restoration | Damage restoration in the industrial and commercial sector | Special restoration, e.g. for wind turbines, ships or rail vehicles | Major losses / Major & Complex loss | Preventive Emergency Planning, Training | RED ALERT® Emergency Response Programme

ENVIRONMENTAL SOLUTIONS

PROFESSIONAL HELP FROM A SINGLE SOURCE

We commit to performing systematic identification of hazards and to manage them with appropriate risk assessment and subsequent action to minimise danger. *Guido Gavio, Asia Complex Loss Director, BELFOR Asia*

www.belfor.com

BELFOR is naturally familiar with crises after all types of incidents and how to deal with the resulting challenges. This ranges from certain precautionary measures to substantial rebuilding concepts. We use specialised disinfection agents and appropriate techniques to ensure a proper disinfection, reducing the number of pathogens like bacteria, fungi and viruses. After disinfection no infectious material or other harmful residues are left behind. Our expertise helps to overcome most challenges.

Our research and development department has developed a protocol which successfully eliminates the chance for users to catch COVID-19 from residues of infected persons who have stayed in the same area. These procedures have been successfully applied to high profile cases.

We also do pre-incident disinfection as a preventative measure. Cold fogging is done to remove all airborne bacteria and viruses.

WHAT WE OFFER

- Dedicated and validated working protocol
- Intervention 24 /7
- Experienced specialists
- Specially trained personnel for these kind of projects
- In-depth and detailed preliminary risk assessment
- Preventative and post COVID-19 disinfection services

FOR THE ENVIRONMENT

Committed to sustainable development, we act in the following areas:

- Waste management in compliance with local standards and the environment
- Traceability of collected waste materials

FOR HEALTH AND SAFETY

We ensure and control:

- Strict compliance with ECDC standards and safety regulations for our customers and employees
- Rigorous control and maintenance programmes for equipment and materials
- Monitoring of clearances and qualifications
- Continuous training of our specialist teams
