NEVER SKIP A BEAT AFTER A DISASTER

When a disaster or catastrophic event occurs, the medical community is faced with demanding and difficult decisions that require immediate attention and action. The requirements of complying with different codes and standards while maintaining a high level of operational readiness is a huge challenge for facility managers, administrators, and other hospital staff.

Hospitals, long-term care, assisted living and other patient care centers can improve their chances of survival by choosing the right disaster recovery partner. Whether you need an expert opinion, preventative care or assistance with a large casualty loss, BELFOR has the resources, knowledge, and experience to help provide a safe and healthy environment.

With more than 300 locations in 34 countries, BELFOR is the largest disaster recovery and management company in the world. We are recognized as a single-source provider of the most comprehensive selection of disaster recovery solutions. We understand that, regardless of the severity of the disaster, patient care and safety is the most important priority. Our solutions focus on:

- Life Safety
- Environment of Care
- Methods of Procedure (MOP)
- Infection Control Issues
- Federal, State and Local Standards and Codes
- Health Care Systems

Fighting HAI With Effective Disinfection

Healthcare-associated infections (HAIs) pose a serious threat to patients and healthcare facilities. BELFOR uses safe, effective disinfectants with an active ingredient based on the botanical ingredient, thyme. For especially difficult to kill viruses and bacteria, a peroxide and peracetic acid solution is included that kills the pathogens yet leaves no harmful residue.

These disinfectants can be applied in virtually every type of environment using small, portable electrostatic sprayers. Electrostatic technology ensures greater surface coverage and adhesion - thus providing more environmentally friendly and effective protection from HAIs.

Vital Records Recovery

Securing and being able to access patient medical data is one of the highest priorities. BELFOR has more experience than any other restoration contractor with treatment and drying services for documents and vital records recovery.

In addition to developing a proprietary, effective process for cleaning and drying X-rays, BELFOR also restores all types of magnetic media, microfilm, microfiche, files, documents, negatives, archives and more.

BELFOR can help. Call our 24-hour hotline.
