HOSPITALS AND HEALTHCARE FACILITIES

PROPERTY RECOVERY SERVICES

When a disasters or catastrophes occur, medical facilities are faced with difficult decisions that require immediate action. The requirements of complying with different codes and standards while maintaining a high level of operational readiness is a huge challenge for administrators, medical staff, and facility managers.

Medical and patient care centers can improve their own chances of survival by choosing the right disaster recovery partner. Whether you need an expert opinion or assistance with a large casualty loss, BELFOR has the resources, experience and knowledge to help recover your facility.

We understand that, regardless of the severity of the disaster, patient care and safety is the most important priority.

Our response teams are well trained in HIPAA awareness policies and stringent infection control regulations. More than 100 of our professionals have Healthcare Construction Certification (HCC) from the American Society of Healthcare Engineering (ASHE).

BELFOR PROPERTYRESTORATION

DISINFECTION - FIGHTING HAIs

Healthcare-associated infections (HAIs) pose a serious threat to patients and healthcare facilities. BELFOR uses a safe and effective disinfectant that kills 99.9% of bacteria and viruses. The disinfectant can be applied using small, portable electrostatic sprayers and leaves no harmful residue.

For added protection, we then apply an antimicrobial surface protectant that provides residual protection for up to 90 days.

Both the disinfectant and surface protectant are environmentally friendly and can be used on food contact surfaces.

VITAL RECORDS RECOVERY

Patient medical data is one of the highest priorities. BELFOR has more experience than any other restoration contractor with the treatment and recovery of documents and vital records.

We developed a proprietary, effective process for cleaning and separating damaged X-rays. Plus, we also restore all types of microfilm, magnetic media, microfiche, and archives.
